# Lightweight Lockback Knives – Tanto Blade

The tanto knife blade is most recognized for its distinct shape and Japanese style swordlike appearance. The tapered, thick point resists cracking or breaking. The dual angled design features a short edge at the tip for precision cutting of soft materials and a long, super-sharp edge for slicing through tough materials. Its centered edge construction allows for straight and balanced cutting, and is made from exceptionally hard AUS 8 stainless steel. The tanto knife by Klein Tools combines the best of traditional knife design with high quality, modern day toolmaking.
