Klein Tools[®] New Non-Contact Voltage Testers Easily Switch Between Dual Ranges

Sept. 15, 2020 (Lincolnshire, Ill.) – Klein Tools (www.kleintools.com), for professionals since 1857, introduces two new non-contact voltage testers, both with dual range and a simple, intuitive user interface to make it easy to change between voltage detection ranges.

Dual Range Non-Contact Voltage Tester 12 – 1000V AC (Cat. No. NCVT-2P) and Dual Range Non-Contact Voltage Tester with Flashlight, 12 – 1000V AC (Cat. No. NCVT-3P)

- Detects AC voltage from 12 to 1000V AC with audible and visual indicators
- Two detection ranges: 70 to 1000V AC and 12 to 1000V AC
- Auto-power off feature conserves battery life
- New user interface is easy to change between voltage detection ranges
- New self-test at startup to improve user safety
- Flashlight on NCVT-3P model only; works independently of the NCV function
- Threaded battery cap, heavy-duty pocket clip, and recessed button design
- NCVT-3P is IP67 dustproof and waterproof

“The problem with many dual range voltage testers is that they do not clearly show the voltage detection range that is currently being used,” says Sabrina Kalsi, product manager at Klein Tools. “With these two new models, we designed an intuitive user interface that makes it easy to switch between ranges with both audible and visual signals, as well as a rugged design. The new testers are perfect for both low voltage systems like doorbells, irrigation systems, security, entertainment and environmental control systems, as well as higher voltage needs like circuit breakers, switches, cords, cables, outlets and wires.”
